Supplemental Figure 13

(A) mRNA expression and flow cytometric analysis of skeletal muscle from Fas^{F/F} and Fas^{Δmye} mice

(A) mRNA expression of respective genes in skeletal muscle of HFD-fed Fas^{F/F} (black bars) and Fas^{Δmye} (blue bars) mice. n=6-10. (B) Flow cytometric analysis of skeletal muscle cells of Fas^{F/F} (black bars) and Fas^{Δmye} (blue bars) mice. Cells were stained with respective antibodies and fluorescence was measured. n=5. All error bars represent SEM.
