

Supplementary Figure S6. Varying ETFB/ETFA ratios in plasma/serum of NMD patients and control groups. Boxplots represent the ETFB/ETFA signal ratio in plasma/serum of NMD patients and control groups, where green, yellow, blue and red boxes represent DMDs, BMDs, female carriers and controls, respectively. For each sample group, the box-and-whisker plot represents signal ratio within lower and upper quantile (box), the median (horizontal line within box), percentiles of 5% and 95% (whiskers) and outliers (dots).
