Fig. S6. Body weight (A), diastolic blood pressure (B), systolic blood pressure (C), and heart rate (D) of Apoe−/− and Fcer1a−/− Apoe−/− mice before and after AAA production (Ang-II infusion). E. Serum total cholesterol, triglyceride, high-density lipoprotein (HDL), and low-density lipoprotein (LDL) levels in Apoe−/− and Fcer1a−/− Apoe−/− mice before and after Ang-II infusion and AAA production. F. Sirius red staining determined total collagen areas in AAA lesions from Apoe−/− and Fcer1a−/− Apoe−/− mice. Data are mean ± SEM. The number of mice per group is indicated in each bar.
